### 3.4 Notes: Using the Pythagorean Theorem

#### Review:

Explain how the diagram is related to the addition statement:  $a^2 + b^2 = c^2$

$$\begin{aligned} a^2 + b^2 &= c^2 \\ 3^2 + 4^2 &= c^2 \\ 9 + 16 &= c^2 \\ 25 &= c^2 \\ \sqrt{25} &= c \\ 5 &= c \end{aligned}$$

The area of the big square is equal to the area of two smaller squares combined.

How do you find the length of one side for the square at left?

$$\begin{aligned} \text{one side} &= \sqrt{A} \\ &= \sqrt{45} \\ &\approx 6.7 \end{aligned} \quad \begin{aligned} \sqrt{36} &< \sqrt{45} < \sqrt{49} \\ 6 &< \sqrt{45} < 7 \end{aligned}$$

How would you find the length of the missing hypotenuse for the right triangle?

$$\begin{aligned} a^2 + b^2 &= c^2 \\ 5^2 + 10^2 &= c^2 \\ 25 + 100 &= c^2 \\ 125 &= c^2 \\ \sqrt{125} &= c \\ 11.1 &\approx c \end{aligned}$$

$$\begin{aligned} \sqrt{121} &< \sqrt{125} < \sqrt{144} \\ 11 &< \sqrt{125} < 12 \end{aligned} \quad \begin{aligned} b & 10\text{cm} \end{aligned}$$

24

$$c = 11.18$$

The hypotenuse is approximately 11.1cm long.

# The Pythagorean Theorem

$$a^2 + b^2 = c^2$$

$c$  = length of the hypotenuse

Find the missing sides for each of the triangles below:

<p> <math>a^2 + b^2 = c^2</math>  <math>8^2 + 5^2 = c^2</math>  <math>64 + 25 = c^2</math>  <math>89 = c^2</math>  <math>\sqrt{89} = \sqrt{c^2}</math>  <math>9.43 = c</math>  <math>9.43\text{cm}</math> </p>	<p> <math>a^2 + b^2 = c^2</math>  <math>a^2 + 7^2 = 10^2</math>  <math>a^2 + 49 = 100</math>  <math>\quad -49 \quad -49</math>  <math>a^2 = 100 - 49</math>  <math>a^2 = 51</math>  <math>a = \sqrt{51}</math>  <math>a \approx 7.2\text{cm}</math> </p>
--	--

Jason is cooking meatballs in his kitchen. One of the meatballs rolls from one corner of the table, diagonally to the other corner. How far does it roll?

$a^2 + b^2 = c^2$   
 $60^2 + 90^2 = c^2$   
 $3600 + 8100 = c^2$   
 $11700 = c^2$   
 $\sqrt{11700} = c$   
 $108.2\text{cm} = c$

The meatball travelled 108.2cm.
